

#FoT-1014:岩喰い／Rock Eater

<Translated 16/Apr/2023>

NN>

As its name suggests, it is a mollusk that eats rocks (stones). The proboscis extending from the bottom is attached to the rock, and the minerals contained in the rock are ingested little by little.

その名の通り、岩(石)を食する軟体生物。
下部から伸びる口吻を岩に取りつかせ、岩に含まれる鉱物を少しずつ摂取していく。
